About Me

Passionate Artificial Intelligence & Data Science student with hands-on experience across **C++, Python, Pandas, NumPy, PyTorch, Scikit-learn, JavaScript, and Node.js**. Currently experimenting with **Machine Learning, Data Analysis, and Algorithmic Trading**. Aspiring to become a **Data Scientist** and an active **Open Source Contributor**.

Skills Summary

- **Languages**: C++(Proficient), C(Good), Python(Decent), JavaScript(Decent), HTML and CSS(Decent)
- **Libraries/Tools**: NumPy, Pandas, Git, GitHub
- **Core Competencies**: Data Structures & Algorithms (DSA), Competitive Programming, Object-Oriented Programming
- **Soft Skills**: Problem-Solving, Community Leadership, Public Speaking, Team Collaboration, Adaptability

Education

- **Indian Institute Of Information Technology, Design & Manufacturing** — Kurnool, Andhra Pradesh, India
  B.Tech in Artificial Intelligence & Data Science; CGPA: 7.3 — *December 2025 - May 2029 (Expected)*
  - ***Relevant Coursework:*** *Data Structures, Analysis of Algorithms, Object-Oriented Programming, Data Science Foundations*

Hackathons & Leadership

- **Solasta 2026 GDG Hackathon** — IIITDM Kurnool, India
  Developer / Participant — *February 2026*
  - **Project**: Collaborated in a team environment to develop a **Community Event Discovery Platform** engineered to streamline local event discovery and student engagement.
  - **Contributions**: Built the frontend presentation layers and responsive user interface components using structural HTML, custom CSS architecture, and interactive JavaScript.
  - **Methodology**: Managed project tracking and code integrations smoothly across the team utilizing Git and GitHub version control workflows under strict event deadlines.

Projects

- **BankSys (Banking Management System) | C, GCC Compiler**
  Command-Line Application
  - Developed a **modular CLI banking system** in **C**, leveraging **low-level memory management** and structured code isolation.
  - Engineered algorithmic logic for **automated account creation**, **secure deposits**, and **controlled balance withdrawals**.
  - Built structured **transaction tracking logs** to maintain transaction history and audit integrity.
- **Quantitative Stock Selector [GitHub] | Python, Pandas, NumPy, yfinance, Matplotlib, Plotly**
  Algorithmic Screening Engine
  - Engineered an automated **stock screening engine** in **Python** to filter high-probability equities across the **NIFTY 500** index.
  - Integrated quantitative indicators including **SMA, RSI, ADX, and Supertrend** combined with **momentum analysis**.
  - Backtested strategies over **5 years of historical data**, yielding a **60% accuracy rate** with targets of **20% weekly profit** capped at a **5% max weekly loss**.

Achievements & Coding Profiles

- **Problem Solving Metrics**: Successfully resolved over **700+ algorithmic and data structure tracking problems** across major global competitive programming ecosystems.
- **LeetCode Metrics**: Attained a peak contest rating of **1750+**, demonstrating high efficiency in complex algorithmic execution under tight time constraints.
- **Codeforces Metrics**: Achieved the division rank of **Pupil** with a maximum global contest performance rating of **1375+**.
- **CodeChef Metrics**: Earned a verified **2-Star status** profile ranking via consistent performance in multi-hour programming contests.
- **Unified Portfolio**: All dynamic competitive profiles, ranking evidence, and metrics are verified via codolio.com/profile/prtbws.
